Bug List:

1.) Submitting a message on the user panel redirects to the sell tab and the message does not appear. We believe this is happening due to misdirection of tabs when making the test suite.

2.) Images that are bigger than 800x600 will not display properly on the html. Image restriction should be expanded.

3.) Changing email redirects to a page that does not exist. This is due to a merging conflict when making a test suite.

4.) Changing passwords does not actually update the previous password in the database. This is also due to a merging conflict when making the test suite.
